

Gynecological History

Description

This dataset contains information on gynecologic history, such as menstrual periods, menopause, use of hormones, diagnosis of endometriosis, other gynecologic conditions, pelvic pain unrelated to menstrual period, number of pregnancies, removal of uterus or ovaries, other gynecologic surgeries.

Participants

All female participants (n = 186) in the study completed the gynecological history questionnaire.

Data Collection Methods

The gynecological history data collection was self-administered in paper-and-pencil format on the arrival day.
