

# COVID-19 Mortality Data Release

**Paul D. Sutton, Ph.D.**

**Deputy Director, Division of Vital Statistics**

Board of Scientific Counselors Meeting

September 17-18, 2020

# COVID-19 Response Timeline

## February

26 Decision made to develop certification guidance for COVID-19 deaths

## March

4 Preliminary Guidance for Certifying COVID-19 Deaths Released

17-20 NCHS Cause of Death Coding System Updated

25 Launched COVID-19 Death Data and Reporting Guidance  
<https://www.cdc.gov/nchs/nvss/covid-19.htm>

27 Prioritized manual coding of cause of death for jurisdictions with a high volume of COVID-19 deaths.

## COVID-19 Response Timeline – continued

### April

- 2 Final Guidance for Certifying COVID-19 Deaths Released
- 3 First Provisional COVID-19 Death Counts Released  
<https://www.cdc.gov/nchs/nvss/vsrr/covid19/index.htm>
- 16 Clinician Outreach and Communication Activity (COCA) webinar on Guidance for Certifying Deaths Due to Coronavirus Disease 2019 (COVID-19)
- 29 Excess Deaths Associated with COVID-19 Visualization Released

### May

- 1 Redesigned Provisional COVID-19 Death Counts

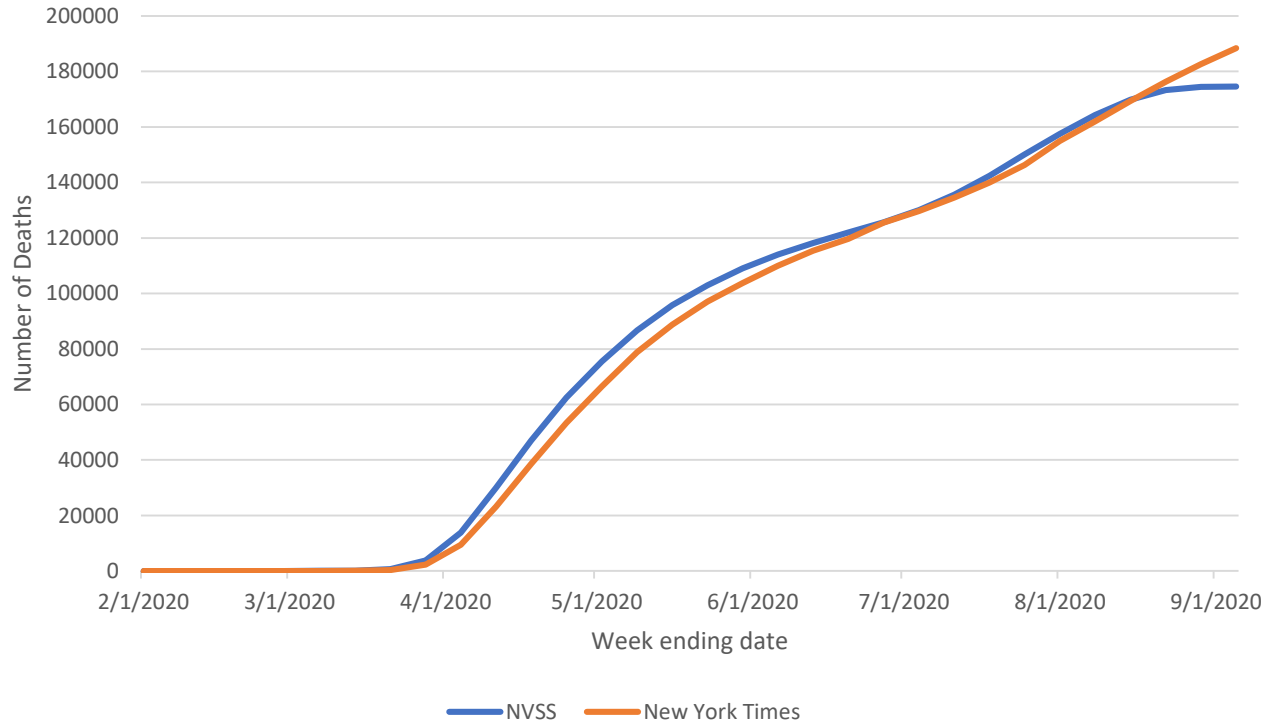

# Provisional COVID-19 Death Counts by week

Data as of September 8, 2020

| Week ending<br>date in which the<br>death occurred | COVID-19<br>Deaths (U07.1) | Deaths from All<br>Causes |
|--|----------------------------|---------------------------|
| <b>Total</b>                                       | <b>174,626</b>             | <b>1,881,375</b>          |
| 2/1/2020   | 0                          | 58,568                    |
| 2/8/2020   | 1                          | 59,282                    |
| 2/15/2020  | 0                          | 58,688                    |
| 2/22/2020  | 5                          | 58,723                    |
| 2/29/2020  | 9                          | 59,149                    |
| 3/7/2020   | 35                         | 59,507                    |
| 3/14/2020  | 52                         | 58,303                    |
| 3/21/2020  | 571                        | 58,966                    |
| 3/28/2020  | 3,151                      | 62,853                    |
| 4/4/2020   | 10,007                     | 72,108                    |
| 4/11/2020  | 16,160                     | 78,837                    |
| 4/18/2020  | 17,039                     | 76,505                    |
| 4/25/2020  | 15,401                     | 73,569                    |
| 5/2/2020   | 13,114                     | 68,960                    |
| 5/9/2020   | 11,141                     | 66,521                    |
| 5/16/2020  | 9,143                      | 64,162                    |

| Week ending<br>date in which the<br>death occurred | COVID-19<br>Deaths (U07.1) | Deaths from All<br>Causes |
|--|----------------------------|---------------------------|
| 5/23/2020  | 7,136                      | 61,266                    |
| 5/30/2020  | 6,090                      | 59,283                    |
| 6/6/2020   | 4,961                      | 58,406                    |
| 6/13/2020  | 4,163                      | 57,481                    |
| 6/20/2020  | 3,771                      | 57,301                    |
| 6/27/2020  | 3,728                      | 57,683                    |
| 7/4/2020   | 4,383                      | 58,557                    |
| 7/11/2020  | 5,518                      | 59,842                    |
| 7/18/2020  | 6,820                      | 60,431                    |
| 7/25/2020  | 7,676                      | 60,670                    |
| 8/1/2020   | 7,393                      | 59,372                    |
| 8/8/2020   | 6,799                      | 57,887                    |
| 8/15/2020  | 5,535                      | 54,280                    |
| 8/22/2020  | 3,504                      | 46,411                    |
| 8/29/2020  | 1,192                      | 30,152                    |
| 9/5/2020   | 128                        | 7,652                     |

# Comparison of Cumulative COVID-19 Death Counts by Data Source (as of 9/8/2020)

# Provisional COVID-19 Death Counts: Demographic and Geographic Detail

## Causes of Death

- COVID-19
- Pneumonia and Influenza (with and without COVID-19)
- Other Selected Causes of Death (with and without COVID-19)

## Demographic Detail

- Sex
- Age
- Race/Hispanic origin

## Time Detail

- Cumulative for pandemic
- Monthly
- Weekly

## Geographic Detail

- National
  - HHS Region
  - Jurisdiction/state
  -
- } Counts 1-9 suppressed

| Footnotes     | Number of deaths reported in this table are the total number of deaths received and coded as of the date of analysis, and do not represent all deaths that occurred in that period. Data during this period are incomplete because of the lag in time between when the death occurred and when the death certificate is completed, submitted to NCHS and processed for reporting purposes. This delay can range from 1 week to 8 weeks or more. Percent of |

# Health Disparities: Race and Hispanic Origin

[https://www.cdc.gov/nchs/nvss/vsrr/covid19/health\\_disparities.htm](https://www.cdc.gov/nchs/nvss/vsrr/covid19/health_disparities.htm)

# Indicators available to illustrate potential differences in the burden of deaths due to COVID-19 by race and ethnicity

- **Count of COVID-19 deaths:** Number of deaths due to COVID-19 reported for each race and Hispanic origin group
- **Distribution of COVID-19 deaths (%):** Deaths for each group as a percent of the total number of COVID-19 deaths reported
- **Unweighted distribution of population (%):** Population of each group as a percent of the total population
- **Weighted distribution of population (%):** Population of each group as percent of the total population after accounting for how the race and Hispanic origin population is distributed in relation to the geographic areas impacted by COVID-19

# Count and percent of COVID-19 deaths and weighted and unweighted population distributions by race and Hispanic origin

# Percent of COVID-19 deaths and weighted and unweighted population distributions by race and Hispanic origin

# Excess Deaths Associated with COVID-19

[https://www.cdc.gov/nchs/nvss/vsrr/covid19/excess\\_deaths.htm](https://www.cdc.gov/nchs/nvss/vsrr/covid19/excess_deaths.htm)

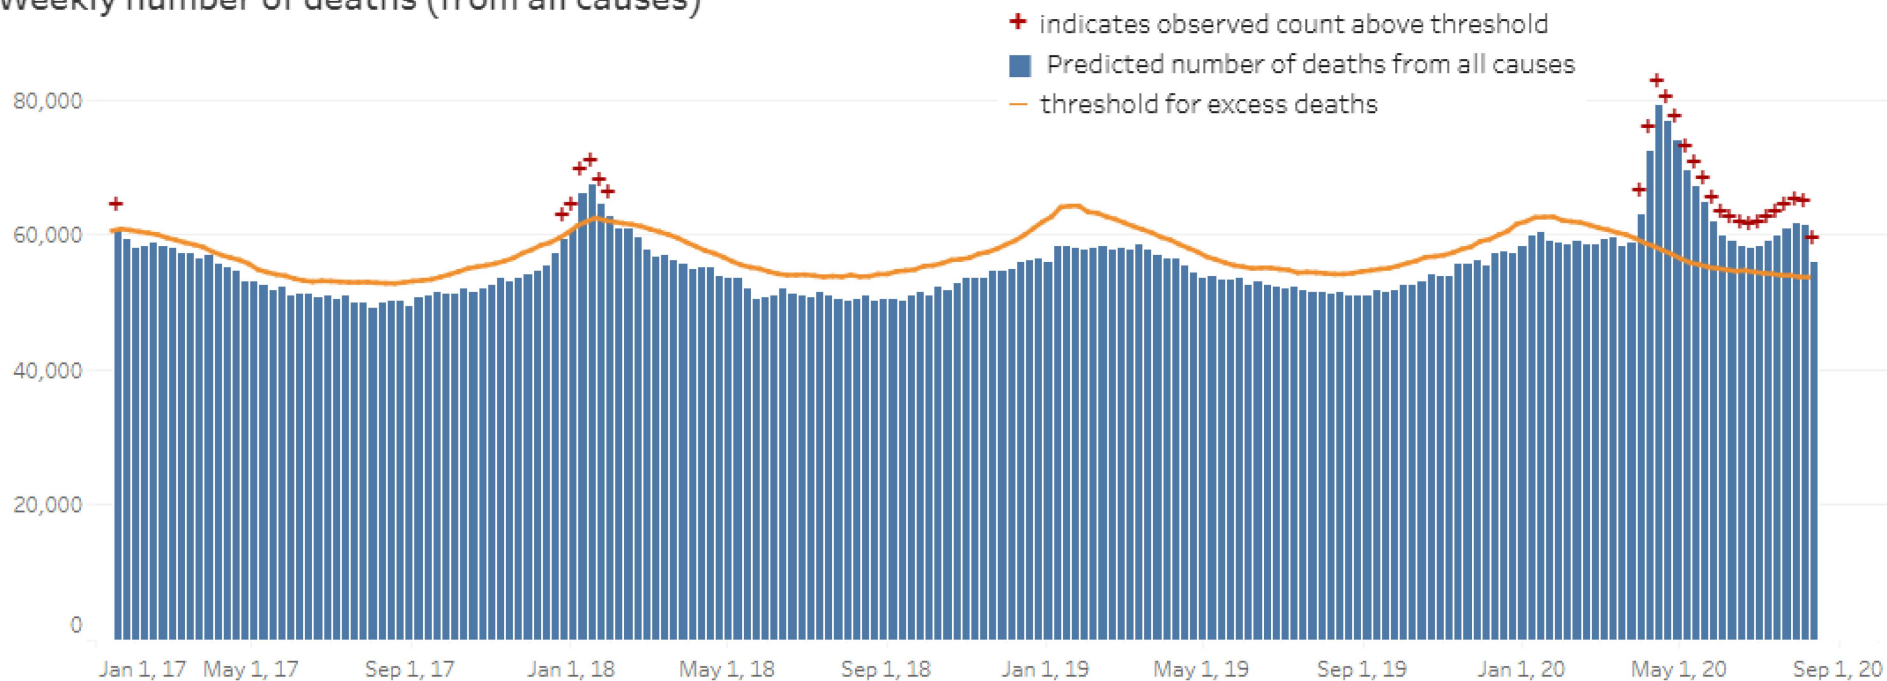

# Methods

- Use existing algorithm (R package ‘surveillance’)\* to model the expected weekly number of deaths
  - Weekly counts of deaths from 2013 to date
  - Over-dispersed Poisson regression models with spline terms to account for seasonal patterns
- Generate the expected number(s) of deaths by jurisdiction and week
  - The average expected number
  - The upper bound of the 95% prediction interval
- $\text{Excess} = \text{observed} - \text{expected}$

\* Noufaily et al., 2012 (<https://onlinelibrary.wiley.com/doi/pdf/10.1002/sim.5595>) and Salmon, Schumacher, Hohle, 2016 (<https://www.jstatsoft.org/article/view/v070i10>)

# Excess deaths associated with COVID-19

Weekly number of deaths (from all causes)

# Excess deaths with and without COVID-19

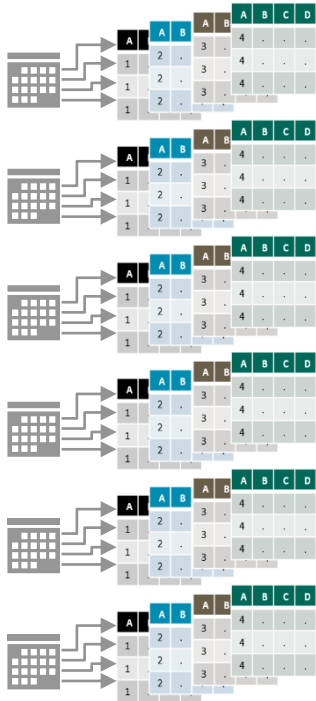

## Weekly number of deaths

Comparing excess deaths including/excluding COVID-19

- + indicates observed count above threshold
- Predicted number of deaths from all causes, including COVID-19
- Predicted number of deaths from all causes, excluding COVID-19
- threshold for excess deaths

# Weighting to account for incomplete data

- Used weekly ‘snapshots’ of provisional data (from 2018-2019) to model underreporting relative to final data
- Predict completeness of provisional data within 1 week of death, 2 weeks, 3 weeks, etc.
- Weights calculated as  $1/\text{completeness}$  for each jurisdiction
  - For example, if provisional data was historically 50% complete within 1 week of death, then the weight for that jurisdiction would be 2

# Comparing weighted and unweighted estimates

- + indicates observed count above threshold
- Predicted number of deaths, accounting for underreporting (weighted)
- Reported number of deaths (unweighted; does not account for underreporting)
- threshold for excess deaths

## Weekly number of deaths (from all causes)

Comparing predicted (weighted) and reported (unweighted) estimates

Total predicted number of excess deaths since 2/1/2020 across the United States: **192,767** — **252,307**

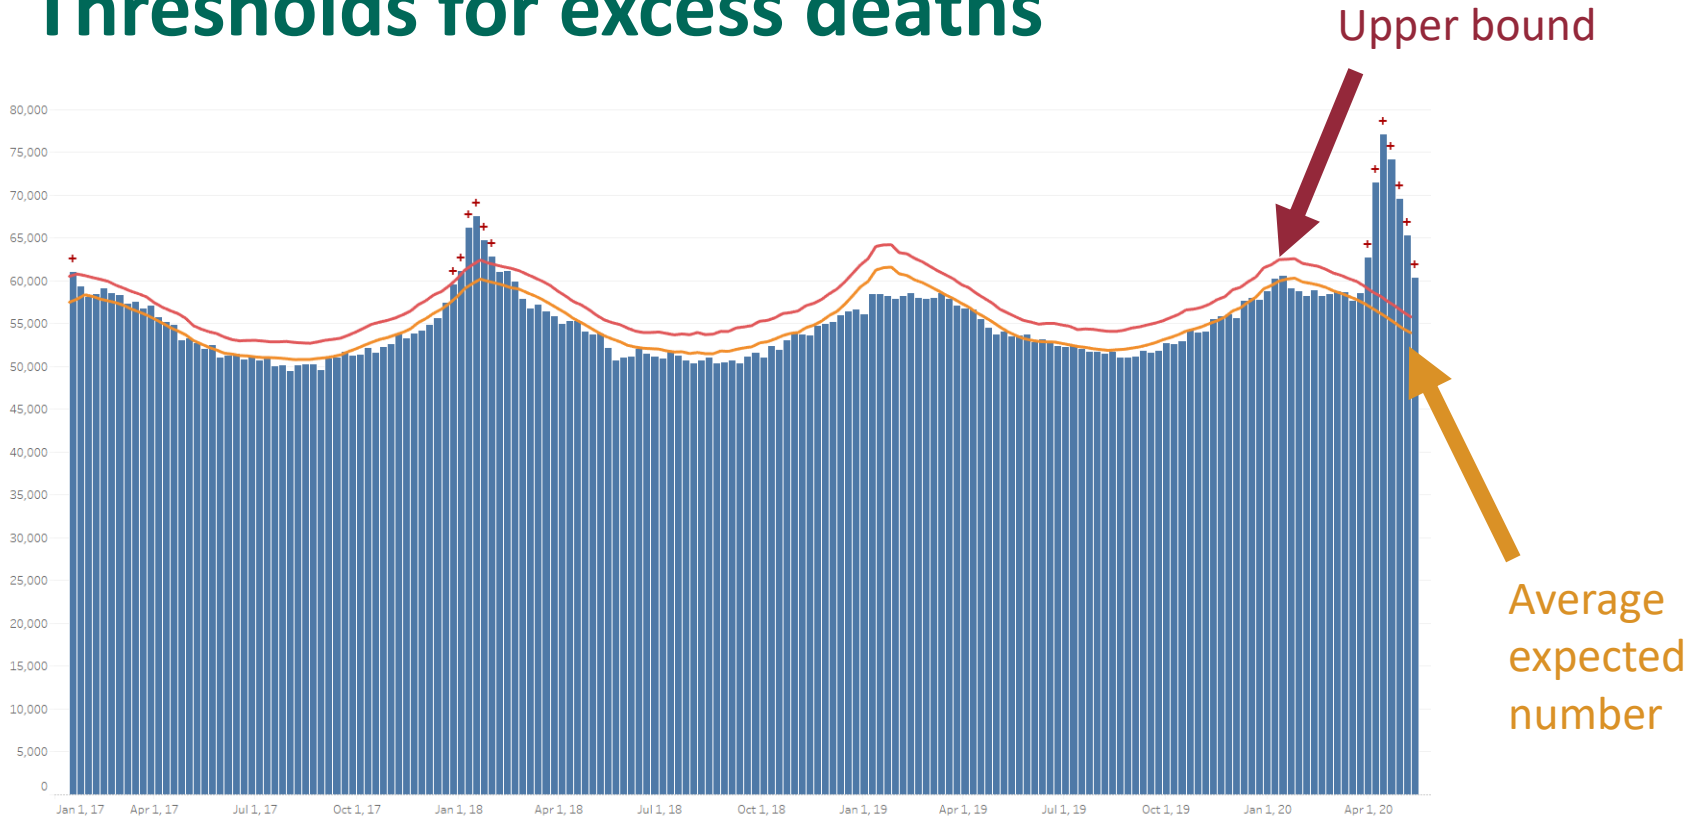

Total predicted number of excess deaths since 2/1/2020, by state

- We show a range for the predicted number of excess deaths
- Based on 2 thresholds:
  - The average expected #
  - The upper bound of the 95% prediction interval

■ Number of deaths over the average expected number  
■ Number of deaths over the upper bound of the 95% CI

# Thresholds for excess deaths

# New(er) dashboards and data

- Weekly counts of death by age group
- Weekly counts of death by race and ethnicity
- Weekly counts of death by underlying cause of death
  - Determined based on comorbidities on COVID-19 death records
    - Respiratory diseases\*
    - Circulatory diseases\*
    - Malignant neoplasms
    - Alzheimer disease and dementia
    - Residual (other select natural causes)\*
  - \* indicates specific causes within those categories also shown

Time Period

# Challenges and Opportunities for Provisional Data Release

## Challenges and Opportunities

- Provisional data is the new normal... how will we continue to improve access to provisional COVID-19 death data, and what will post pandemic release of provisional data look like?
- Current approaches for adjusting incomplete provisional data based on reporting patterns in previous years are inadequate... can data science offer solutions to provide a more dynamic approach based on what is happening now that would allow for more timely and more accurate provisional estimates?

# Comments & Questions
