## **CDC WONDER and Provisional Data**

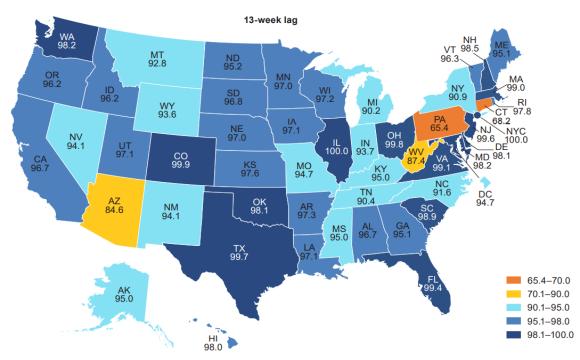

- New query screen similar to those used for final mortality data
- Add week of death
- Add state of death occurrence (currently only by residence)
- Improved Boolean logic for queries
- Modernized and enhanced API

## What we are still thinking about...

- Reporting lags generally... provisional data are incomplete.
- Reporting lags differ by Jurisdiction and Cause of Death
- Optimum update frequency
- Provisional data have had limited quality review and will have higher levels of unknowns, pendings, and other errors than final data
- How much descriptive analysis is needed to accompany provisional data releases
- Other issues
