

Health, United States: Past, Present, and Future

Irma Arispe, PhD

Renee Gindi, PhD

Office of Analysis and Epidemiology

Board of Scientific Counselors Meeting

June 19, 2018

Outline

- Part 1
 - What is *Health, United States*?
 - Where are we now?
 - Production, access, and stakeholder challenges, Opportunities
 - Lessons learned
- Part 2
 - Where are we going?
 - Visions for the future
 - Feedback and questions

What is *Health, United States*?

- Statutory mandate
- Goals and uses of the report
- What are the components of the *Health, United States* report?

Health, United States: NCHS' statutory mandate

GENERAL PROVISIONS RESPECTING EFFECTIVENESS, EFFICIENCY, AND QUALITY OF HEALTH SERVICES

SEC. 308. [242m] (a)(1) Not later than March 15 of each year, the Secretary shall submit to the President and Congress the following reports:

(A) A report on health care costs and financing. Such report shall include a description and analysis of the statistics collected under section 306(b)(1)(G).

(B) A report on health resources. Such report shall include a description and analysis, by geographical area, of the statistics collected under section 306(b)(1)(E).

(C) A report on the utilization of health resources. Such report shall include a description and analysis, by age, sex, income, and geographic area, of the statistics collected under section 306(b)(1)(F).

(D) A report on the health of the Nation's people. Such report shall include a description and analysis, by age, sex, income, and geographic area, of the statistics collected under section 306(b)(1)(A).

(2) The reports required in paragraph (1) shall be prepared through the National Center for Health Statistics.

(3) The Office of Management and Budget may review any report required by paragraph (1) of this subsection before its submission to Congress, but the Office may not revise any such report or delay its submission beyond the date prescribed for its submission, and may submit to Congress its comments respecting any such report.

Section 308 of the
Public Health
Service Act

Health, United States: Functions, Features, Uses

■ **Functions**

- Fulfill statutory mandate
- NCHS flagship publication

■ **Features**

- Authoritative, comprehensive data in areas of interest to policymakers
- National trends in health
- Timely
- Easy to access

■ **Uses**

- Find a statistic!
- Monitor trends in the nation's health
- Set research and program priorities
- Develop policies and programs
- Evaluate progress in meeting national health objectives

What are the components of *Health, United States*?

- **At a Glance Table**
- **Highlights**
- **Chartbook with Special Feature**
- **Trend tables**
- **Appendices**
 - Data Sources
 - Definitions and Methods
- ***Health, US In Brief***
- **PowerPoint Chartbook figures**
- **PDF and Excel Trend Tables**
- **Related products**
 - Spotlight Infographics
 - Content in NCHS FastStats
 - Stat of the Day tweets

Where are we now?

- *Health, United States* is in a time of transition due to:
 - Production challenges
 - Stakeholder and Access challenges

Production Challenge: Beautiful report, complex tables

- Production and quality control are highly labor intensive
- Requirements for 508 compliance were difficult to implement
- NCHS retired Xyvision software, and staff retirements meant a change was needed
- NCHS had limited experience with the new InDesign software
- There were concerns about the overall cost of the report

Opportunity: Production contract awarded in 2016

- A contract was awarded for production of *Health, United States, 2016* and the In Brief.
- External contract allowed for re-deployment of limited NCHS staff resources, and gave NCHS staff time and opportunity to learn new publishing software
- OAE worked with a CDC-recommended contractor who was familiar with typesetting of complex tables
- We printed far fewer books than in previous years

Lessons learned from the 2016 report

- It can be done. It is possible to contract out production and get a product that looks “just like” the traditional book
- Production issues emerged from using an external contractor
- Reduced printing and dissemination of “big book” to Congress did not result in an outcry for the product
- Motivated and flexible staff are our most important resource!

Production Challenge: Planning ahead during times of change

- We planned to contract out *Health, United States 2017*
- Bid to produce *Health, United States, 2017* nearly doubled
- Discussions with the NCHS Director offered the opportunity to make decisions about the 2017 report (including a pause)
- We decided 2017 was not the year to pause from the standpoint of our agency mission
 - Presentation/suppression guidelines
 - Trend guidelines
 - Functioning and disability

Opportunity: Hybrid approach for *Health, US 2017*

- Split production into two parts
- NCHS contracted out the production of an “enhanced In Brief” (Chartbook and Special Feature)
- NCHS’ Office of Information Services/Office of Information Technology worked with OAE staff for in-house production of trend tables
- Only selected components will be printed, and only a very few copies

What are the components of *Health, United States 2017*?

- **At a Glance Table**
- **Highlights**
- **Chartbook with Special Feature**
 - **Tables for the Chart book**
 - **List of trend tables**
 - **Index**
- **Trend tables**
- **Appendices**
 - Data Sources
 - Definitions and Methods
- **PowerPoint Chartbook figures**
- **PDF and Excel Trend Tables**
- **Related products**
 - Spotlight Infographics
 - Content in NCHS FastStats
 - Stat of the Day tweets

2017 printed components

Lessons learned (so far) from the 2017 report

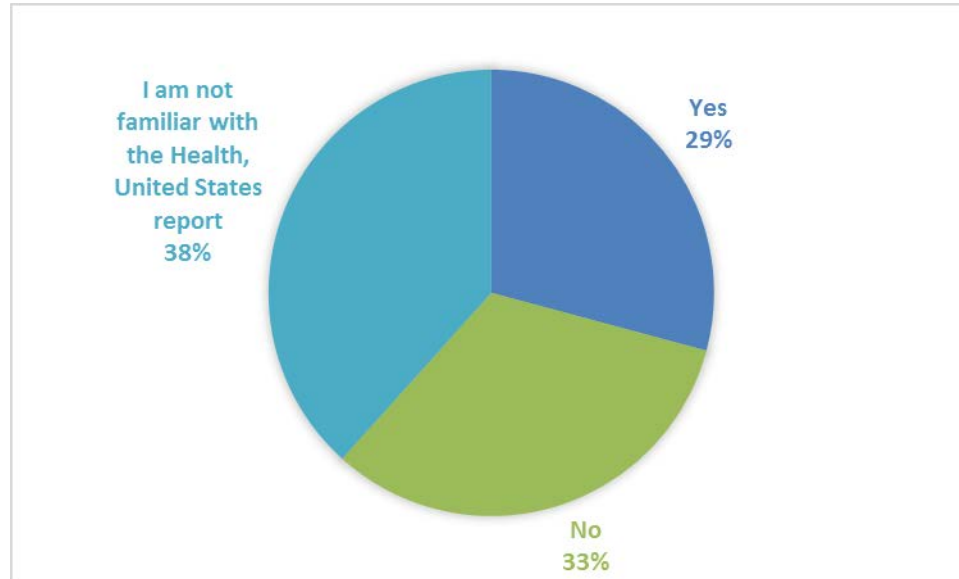

- Splitting the product was not straightforward
 - Decision was driven by production factors
 - The split product had content implications
 - The process of changing production delayed the product
- Motivated and flexible staff are our most important resource!
 - Staff were dealing with two products and addressing coordination
 - Advancements in production of tables allowed us to bypass InDesign software
 - We are better established to produce tables in the future
- Cost savings difficult to determine
- Difficult, if not impossible, to plan for the future while doing a complete report

Stakeholder and Access challenges

- Audience recognition
- Difficulty finding information
- Meeting stakeholder needs in mode of dissemination

Challenge: Our target audience doesn't always recognize us

120 respondents to the 2017 National Center for Health Statistics Users' Survey were asked: "In the past year, have you accessed Health, United States, the annual report on the health status of the Nation?"

Challenge: Our target audience has difficulty finding information

- Comments from NCHS web users indicate some difficulty in navigating the NCHS website
 - “Ease of finding information has improved over the years but I still Google the site more often than I use the search bar.”
 - “When searching, often overwhelming information is provided; may be helpful if there is better search engine/way to look up information.”
 - “The search doesn't work as well as I would like. Spent time on page trying to find data.”

Challenge: Some of our key stakeholders may be not be taking advantage of information in *Health, US*

- Because they do not retain large printed books

“And at the end of the year, you will see lots and lots of these big kind of mobile trash barrels. And you will see people just throwing away just pounds and pounds of reports into the trash,” said [a longtime Hill staffer]. During the year, he said, “we used them as doorstops. Literally. The thicker ones, we used them as doorstops.”

- Because PDF versions of *Health, US* are not searchable by Google and other search engines.

Opportunity: New website search/filter tool

- For those who access Health, US
 - In 2016: Drop down menus allow the user to find tables related to specific topics or sub-populations of interest
 - In 2017: We are making further enhancements
 - Moving functionality to the Health, US homepage
 - Updated subpopulation, topic
 - More user-friendly classifications

When Pentagon decision makers need to know how to prevent diseases and injuries that reduce military readiness and drive up health care costs, Department of Defense (DoD) policy[2] directs them to the Community Preventive Services Task Force (CPSTF). CPSTF findings are the gold standard for what works to improve health and prevent disease and injury in service members, their families, and all Americans.[2] Employers, health systems, and policy makers also use CPSTF findings to improve the health and well-being of employees, patients, communities, and citizens. This 2017 Annual Report to Congress highlights the CPSTF's work to support the readiness, resilience, and well-being of the United States (U.S.) Armed Forces.

Health Challenges Facing the Military

Military performance is compromised if personnel are not healthy and physically fit. Obesity, tobacco use, and alcohol abuse pose a significant threat to military readiness and resilience (Figure 1). In 2010, [Mission: Readiness](#), a non-partisan national security organization of more than 700 retired generals and admirals, sounded the alarm on the dramatic increases in obesity in young adults, rendering them unfit to enter the military.[3] [The Institute of Medicine warned, in a 2009 report](#), that smoking "adversely affects military readiness; harms the health and welfare of military families, retirees, and veterans; and costs the nation millions of dollars in health care and lost productivity each year. Tobacco use has been implicated in higher dropout rates during and after basic training, poorer visual acuity, and a higher rate of absenteeism in active-duty military personnel in addition to a multitude of health problems." [4] Numerous reports also document that heavy drinking and alcohol abuse are more prevalent in the military than the general population, with serious consequences such as missing a week or more of duty, productivity losses, and driving while impaired.[5,6]

As a result, DoD health care costs are increasing. A 2016 report on TRICARE's fiscal year 2014 expenditures estimated the direct and indirect costs (including lost workdays and administrative costs) associated with tobacco use and obesity among active duty personnel and military families were \$2.4 billion and \$9.3 billion, respectively.[6] Direct and indirect (estimated) costs associated with alcohol-related medical problems were \$1.2 billion and \$73 million, respectively.[7]

Public Health Concerns of U.S. Military for Active Duty Personnel

Figure 1: Source: 2011 [Health-Related Behaviors Survey of Active Duty Personnel](#) (the most recent year for which data are available).

CPSTF Evidence-Based Recommendations

Since its establishment in 1996, the CPSTF has issued over 230 recommendations and other findings about programs, services, and other interventions that are effective in addressing obesity, physical activity,

Child Welfare Outcomes, an annual report to Congress published by the U.S. Department of Health and Human Services, provides information on state performance in seven categories of outcomes that are widely accepted performance objectives for child welfare practice. The report also includes findings of analyses conducted on performance across states and over time. Users of this data site will be able to explore the outcomes, demographic, and context data contained in the report and generate customized reports by state and year.

What Unites and Divides Urban, Suburban and Rural Communities

Amid widening gaps in politics and demographics, Americans in urban, suburban and rural areas share many aspects of community life

BY KIM PARKER, JULIANA MENASCE HOROWITZ, ANNA BROWN, RICHARD FRY, D'VERA COHN AND RUTH IGIELNIK

(iStock/Getty Images)

Large demographic shifts are reshaping America. The country is growing in numbers, it's becoming more racially and ethnically diverse and the population is aging. But according to a new analysis by Pew Research Center, these trends are playing out differently across community types.

Planning for the [near] future

- Possibilities for *Health, United States 2018* include:
 - As-is
 - As-is but no Special Feature
 - Trend tables only
 - Chartbook only
 - Pause production of *Health, US* and spend that time redesigning

Questions to answer

- Who is our audience?
- Who are our competitors and what can we learn from them?
- What do we know about data users' experiences with the report?

Questions to answer

- How do we create a cohesive product without a unified print document?
- How much more/less effort is needed to create tables and charts for the web instead of print?
- What are the resources needed to create interactive data visualizations?

Feedback and Questions

Philosophy

- Where does *Health, United States* fit in with other NCHS products?

Stakeholder outreach

- Where should we be reaching out?

Report examples

- Other examples of annual or omnibus reports?

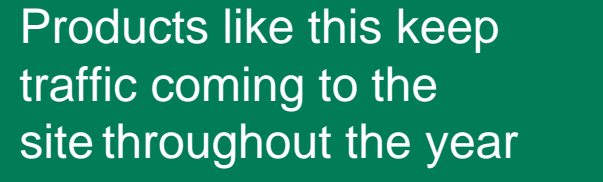

Questions?
